Tkinter 8.5 reference: a GUI for Python

20. The Radiobutton widget

Radiobuttons are sets of related widgets that allow the user to select only one of a set of choices. Each radiobutton consists of two parts, the *indicator* and the *label*:

- The indicator is the diamond-shaped part that turns red in the selected item.
- The label is the text, although you can use an [image](#) or [bitmap](#) as the label.
- If you prefer, you can dispense with the indicator. This makes the radiobuttons look like “push-push” buttons, with the selected entry appearing sunken and the rest appearing raised.
- To form several radiobuttons into a functional group,

2017 2018 2(▼ About this capture

The control variable can be either an `IntVar` or a `StringVar`. If two or more radiobuttons share the same control variable, setting any of them will clear the others.

- Each radiobutton in a group must have a unique value option of the same type as the control variable. For example, a group of three radiobuttons might share an `IntVar` and have values of 0, 1, and 99. Or you can use a `StringVar` control variable and give the radiobuttons value options like 'too hot', 'too cold', and 'just right'.

To create a new radiobutton widget as the child of a root window or frame named *parent*:

```
w = tk.Radiobutton(parent, option, ...)
```

This constructor returns the new Radiobutton widget. Options:

Table 29. Radiobutton widget options

| | |
|------------------|---|
| activebackground | The background color when the mouse is over the radiobutton. See Section 5.3, “Colors” . |
| activeforeground | The foreground color when the mouse is over the radiobutton. |
| anchor | If the widget inhabits a space larger than it needs, this option specifies where the radiobutton will sit in that space. The default is <code>anchor=tk.CENTER</code> . For other positioning options, see Section 5.5, “Anchors” . For example, if |

| <div> <input type="text"/> <input type="button" value="Go"/> <div> JAN MAR MAY <div>05</div> 2017 2018 2019 </div> </div> <div> 4 captures 21 Jan 2017 - 5 Jul 2018 </div> <div> About this capture </div> | |
| bg or background | The normal background color behind the indicator and label. |
| bitmap | To display a monochrome image on a radiobutton, set this option to a bitmap; see Section 5.7, "Bitmaps" . |
| bd or borderwidth | The size of the border around the indicator part itself. Default is two pixels. For possible values, see Section 5.1, "Dimensions" . |
| command | A procedure to be called every time the user changes the state of this radiobutton. |
| compound | If you specify both text and a graphic (either a bitmap or an image), this option specifies where the graphic appears relative to the text. Possible values are tk.NONE (the default value), tk.TOP, tk.BOTTOM, tk.LEFT, tk.RIGHT, and tk.CENTER. For example, compound=tk.BOTTOM would position the graphic below the text. If you specify compound=tk.NONE, the graphic is displayed but the text (if any) is not. |
| cursor | If you set this option to a cursor name (see Section 5.8, "Cursors"), the mouse cursor will change to that pattern when it is over the radiobutton. |
| disabledforeground | The foreground color used to render |

| font | The font used for the text. See Section 5.4, "Type fonts" . |
| fg or foreground | The color used to render the text. |
| height | The number of lines (<i>not</i> pixels) of text on the radiobutton. Default is 1. |
| highlightbackground | The color of the focus highlight when the radiobutton does not have focus. See Section 53, "Focus: routing keyboard input" . |
| highlightcolor | The color of the focus highlight when the radiobutton has the focus . |
| highlightthickness | The thickness of the focus highlight. Default is 1. Set highlightthickness=0 to suppress display of the focus highlight. |
| image | To display a graphic image instead of text for this radiobutton, set this option to an image object. See Section 5.9, "Images" . The image appears when the radiobutton is <i>not</i> selected; compare selectimage, below. |
| indicatoron | Normally a radiobutton displays its indicator. If you set this option to zero, the indicator disappears, and the entire widget becomes a "push-push" button that looks raised when it is cleared and sunken when it is set. You may want to increase the borderwidth value to make |

| justify | If the text contains multiple lines, this option controls how the text is justified: tk.CENTER (the default), tk.LEFT, or tk.RIGHT. |
| offrelief | If you suppress the indicator by asserting indicatoron=False, the offrelief option specifies the relief style to be displayed when the radiobutton is not selected. The default value is tk.RAISED. |
| overrelief | Specifies the relief style to be displayed when the mouse is over the radiobutton. |
| padx | How much space to leave to the left and right of the radiobutton and text. Default is 1. |
| pady | How much space to leave above and below the radiobutton and text. Default is 1. |
| relief | By default, a radiobutton will have tk.FLAT relief, so it doesn't stand out from its background. See Section 5.6, "Relief styles" for more 3-d effect options. You can also use relief=tk.SOLID, which displays a solid black frame around the radiobutton. |
| selectcolor | The color of the radiobutton when it is set. Default is red. |

| | |
|---|--|
| <div> <input type="text"/> <input type="button" value="Go"/> <div> <div>JAN MAR MAY</div> <div>◀ 05 ▶</div> <div>2017 2018 2019</div> </div> </div> <div> <div>4 captures</div> <div>21 Jan 2017 - 5 Jul 2018</div> <div> <div>2017 2018 2019</div> <div>2018 2019 2020</div> </div> </div> <div> <div> <div>?</div> <div>f</div> <div>✕</div> <div>Twitter</div> </div> <div>About this capture</div> </div> | |
| | the selectimage option to a different image that will be displayed when the radiobutton is set. See Section 5.9, "Images" . |
| state | The default is state=tk.NORMAL, but you can set state=tk.DISABLED to gray out the control and make it unresponsive. If the cursor is currently over the radiobutton, the state is tk.ACTIVE. |
| takefocus | By default, the input focus (see Section 53, "Focus: routing keyboard input") will pass through a radiobutton. If you set takefocus=0, focus will not visit this radiobutton. |
| text | The label displayed next to the radiobutton. Use newlines ('\\n') to display multiple lines of text. |
| textvariable | If you need to change the label on a radiobutton during execution, create a StringVar (see Section 52, "Control variables: the values behind the widgets") to manage the current value, and set this option to that control variable. Whenever the control variable's value changes, the radiobutton's annotation will automatically change to that text as well. |
| underline | With the default value of -1, none of the |

| <div> <input type="text"/> <input type="button" value="Go"/> <div> <div>JAN</div> <div>MAR</div> <div>MAY</div> </div> <div> <div>◀</div> <div>05</div> <div>▶</div> </div> <div> <div>2017</div> <div>2018</div> <div>2019</div> </div> <div> <div>20</div> <div>21</div> <div>22</div> </div> <div> <div>?</div> <div>f</div> <div>✕</div> <div>Twitter</div> </div> </div> <div> <div>4 captures</div> <div>21 Jan 2017 - 5 Jul 2018</div> <div>About this capture</div> </div> | |
| | from zero) to underline that character. |
| value | When a radiobutton is turned on by the user, its control variable is set to its current value option. If the control variable is an IntVar, give each radiobutton in the group a different integer value option. If the control variable is a StringVar, give each radiobutton a different string value option. |
| variable | The control variable that this radiobutton shares with the other radiobuttons in the group; see Section 52, “Control variables: the values behind the widgets” . This can be either an IntVar or a StringVar. |
| width | The default width of a radiobutton is determined by the size of the displayed image or text. You can set this option to a number of characters (<i>not</i> pixels) and the radiobutton will always have room for that many characters. |
| wrlength | Normally, lines are not wrapped. You can set this option to a number of characters and all lines will be broken into pieces no longer than that number. |

Methods on radiobutton objects include:

.flash()

Flashes the radiobutton a few times between its active and normal colors, but leaves it the way it started.

.invoke()

You can call this method to get the same actions that would occur if the user clicked on the radiobutton to change its state.

.select()

Sets (turns on) the radiobutton.
